## Familia Hesperiiidae – Skippers family

---

Esta familia de mariposas primitivas tiene como característica las antenas con ganchito en la parte final. Tamaño mediano a pequeño con menos de 55 mm de envergadura en las alas, cabeza y cuerpo grueso en comparación con las alas, vuelan muy rápido. Muchas tienen colores oscuros o cafés. Se alimentan principalmente del néctar de las flores y excrementos de aves (por eso son atraídas con el color blanco). Las larvas se distinguen por doblar las hojas de su planta hospedera y unir las con hilos de seda, para formar un refugio.

En el planeta hay unas 4.127 especies de hespéridos y en el neotrópico están presentes 2.365 el 57% de ellas. Tienen 6 subfamilias:

This family of primitive butterflies has antennas with a hook in the end. Medium size with less than 55 mm wingspan, head and thick body compared to wings, and fly very fast. Many have dark or brown colors. They feed mainly on the nectar of flowers and bird droppings (that's why they are attracted to the color white, as in spitwads). The larvae are distinguished by folding the leaves of their host plant and joining them with silk threads, to form a refuge.

There are some 4.127 species of skippers on the planet and 57% of them are present in the Neotropics. 6 subfamilies: 4 spreadwings, 1 skipperlings (mostly *Dalla*), and 1 grass skippers.

### Eudaminae – Spreadwings

---

Se posan con las alas abiertas, muchas tienen colas y manchas o rayas en las alas anteriores.

Sit with wings open, many have tails and spots or stripes on the forewing.

### Tagiadinae - Flats

---

Esta nueva subfamilia se encuentra en las regiones tropicales y tiene un género representativo: *Celaenorrhinus*.

This new subfamily is found in the tropical regions and has a representative genus: *Celaenorrhinus*

## Pyrrhopyginae - Golf-club skippers or Firetips

---

Se posan con las alas abiertas, algunas tienen puntas rojas en el abdomen. Tienen la punta de las antenas dobladas en un ángulo de 90 grados, como un palo de golf. Vuelan poderosamente, con cuerpos y alas fuertes, pueden zumbiar. Algunas muy coloridos.

These are the biggest skippers, and they usually sit with wings open, some have red tips to abdomen. Tip of antennae bent over at 90 degree angle, like a golf club. Powerful fliers, strong bodies and wings, can buzz you. Some are very colorful.

## Pyrginae - Other spreadwings

---

Esta subfamilia se posa con las alas abiertas, antenas rectas. Menos manchas y rayas que *Eudaminae*, alas delanteras de colores sólidos y pocas colas. Algunas con alas inferiores azules.

Sit with wings open, straight antennae. Less spots and stripes than *Eudaminae*, solid colored forewings and few with tails. Some with blue undersides.

## Heteropterinae -Skipperlings

---

Las Dallas - la mayoría se posan con las alas arriba, como los saltarines de hierba. A menudo tienen grandes patrones dorados o naranja en la parte inferior. Se encuentran en piso mojado en elevaciones más altas, algunas muy altas. No están en las tierras bajas. Hay muchas especies y muy confusas para su identificación.

The Dallas – small, most sit with forewings up, like grass skippers, but some species sit with open wings. Often have large gold or orange patterns on underside. Found on wet dirt at higher elevations, some very high. Not in the lowlands. Many very confusing species.

## Hesperiinae -Grass skippers

---

Mariposas pequeñas que se posan en posición de "avión de reacción", con las alas anteriores hacia arriba y las alas posteriores hacia fuera en posición plana. Muchas son de color naranja y negro, o marrón. Muchas solo pueden ser separados por disección genital. algunas les gustan las flores en los jardines, a otras el sotobosque.

Sit in "jet plane" position, with forewings straight up and hindwings out flat. Many are orange and black, or brown. Many can only be separated by genitalic dissection. Small butterflies, some like flowers in gardens, some like shaded forest.

## Convenciones

---

La taxonomía y la secuencia de este catálogo sigue las publicaciones del 2019 de Li et al., Cong et al., and Zhang et al. (Ver bibliografía)

Cada foto de una especie tiene la mayor cantidad de información posible en el menor espacio, los números en azul significan:

### 1 Sexo

Cuando sea posible, ponemos el sexo del espécimen de la foto, ya sea porque la especie tiene dimorfismo sexual o porque en algunos casos se observó a la hembra poniendo huevos.

## 2 Nombre científico

El nombre científico con género, especie y subespecie cuando sea posible. Con la taxonomía revisada de la familia HesperIIDae, varias especies cambiaron el género o el nombre, en esos casos colocaremos el antiguo género o nombre con el texto en **rojo** después del nuevo nombre científico.

Los nombres científicos con el género y **sp** corresponden a especies que tienen una identificación desconocida o dudosa, ya que puede haber varias especies con dudas será **sp1**, **sp2**, etc., una vez que se identifique positivamente, la **sp** se cambiará al nombre correcto de la especie.

En el caso de especies no descritas para la ciencia, que todavía no tienen nombre, colocamos **sp nov.** Por favor, si puede ayudarnos a completar o corregir, escribanos a los contactos.

En muchos lugares hay especies sin identificación positiva, preferimos colocar fotos de estas especies para que se sepa que esta especie está en ese lugar y para que en el futuro alguien pueda describirla. En caso de que tengamos dudas incluso con el género, ponemos el género que consideramos más cercano y dos signos de interrogación como este: **??**.

En algunos casos de especies que se encuentran en estudios taxonómicos colocamos mientras se definen los nombres así: **sp [grupo]**

## 3 Información de la foto

Cuando sea posible, la información de la foto tendrá el país, la abreviación de la localidad, la altitud y el mes/día en que se tomó la foto.

La mayoría de las fotos fueron tomadas de mariposas vivas en su entorno natural. El país donde fue tomado se indica con una abreviación en letras. Esta abreviación de dos letras corresponde al código internacional utilizado en Internet para cada país, por ejemplo. Brasil **BR**, Ecuador **EC**, Perú **PE** etc.

Después del código del país, ponemos una abreviatura de la localidad (consulte en la tabla de localidades por país los códigos equivalentes usados en las fotos), luego la altitud donde se tomó la foto en metros sobre el nivel del mar y la época del año, mes y día, para dar una idea de la fecha que estuvo volando en este lugar.

## 4 Rango

El rango de distribución de las especies con una abreviatura del nombre de los países de norte a sur, en algunos casos con especies que habitan en los Estados Unidos y México, utilizamos el código de los estados más australes donde están las especies **Tx** Texas, **Chi** Chiapas. En países grandes como Brasil, a veces utilizamos información adicional como la parte superior del Amazonas, la parte inferior, etc. En Colombia y otros países podemos incluir una posición relativa a la cordillera de los Andes. Esta información se coloca entre paréntesis después de la abreviación del país.

## 5 Fotógrafo

La abreviación del nombre del fotógrafo que tomó la foto, en la esquina inferior derecha de la imagen de cada especie, reconoce su colaboración, en la tabla de fotógrafos se encuentra el nombre completo.

## 6 Secuencia de la foto

En la esquina superior derecha hay un número consecutivo que ayuda a localizar o hacer referencia rápidamente a la posición de una especie en el catálogo.

## Conventions

---

The taxonomy and sequence of this catalog follows the publications in 2019 by Li et al., Cong et al., and Zhang et al. (See Bibliography).

1 ♂

2 *Agara perissodora* *Myscelus*

3 CO-QEV, 1977m jun12

MX-CO,VZ 4

AN 5

119 6

Each photo of a species has the most amount of information possible in the shortest space we can use, the numbers in blue means:

### 1 Sex

When possible we put the sex of the specimen of the photo, either because the species have sexual dimorphism or because in some cases we saw the female laying eggs.

### 2 Scientific name

The scientific name with genus, species and subspecies when possible. With the revised taxonomy of the HesperIIDae family several species changed the genus or the name, in those cases we will put the old genus or name in red after the new scientific name.

Scientific names with the genus and **sp** correspond to species that have unknown or doubtful identification, as there may be several species with doubt it will be **sp1**, **sp2**, etc., once positively identified the sp will be changed to the correct name.

In the case of species not described by science, which have no name yet we place **sp nov**. Please if you can help complete or correct write to us, see contacts.

In many locations there are species without positive identification, we prefer to place photos of these species so that it is known that this species is in that place and so that in the future someone can describe it. In case we have doubts even with genus we put the genus that we consider closest and two question marks like this: **??**.

In some cases of species that are in taxonomic studies, we put the names like this: **sp [group]**.

### **3 Photo Information**

When possible the information of the photo will have the country, the location, the altitude and the month/day when the photo was taken.

Most photos were taken of live butterflies in their natural environment. The country where it was taken is indicated with a two-letter abbreviation. This abbreviation corresponds to the international code used as the Internet termination of the code of each country, eg. Brazil **BR**, Ecuador **EC**, Peru **PE** etc.

After the country code we put an abbreviation of the location (see table of equivalent codes for photo locations), then the altitude where the photo was taken in meters and the time of the year, month and day, to give an idea of the time it was flying in this place.

### **3 Range**

The range of distribution of the species with an abbreviation of the name of the countries from north to south, in some cases with species that inhabit the United States and Mexico we use the code of the southernmost states where there are the species **Tx** Texas, **Chi** Chiapas. In large countries like Brazil we sometimes use additional information like upper or lower Amazon, or states/departamentos. In Colombia and other countries we may include a position relative to the Andes. This information is shown in parenthesis after the country abbreviation.

### **5 Photographer**

The abbreviation of the photographer's name that took the photo, in the lower right corner of the image of each species gives recognition for her/his collaboration. In the photographers table you can see the complete name.

### **6 Photo sequence**

In the upper right corner is a consecutive number that helps to quickly locate or reference the position of a species in the catalog.

# Clasificación familia Hesperiidae

En este listado colocamos todos los géneros de la familia agrupados por capítulo/subfamilia, de tal manera que en cualquiera de los capítulos se pueda saber la ubicación de un género.

We have listed below all the genera in the family within each Chapter, to help with locating a particular genus.

## Nota importante

---

Este trabajo es la primera entrega de seis, en la serie en PDF de Guías de las familias de mariposas Neotropicales. Puede contener errores en una variedad de detalles e identificaciones, pero debido a que solo se produce en una versión electrónica, es fácil corregir todos los errores. Agradecemos todas las críticas, sugerencias y correcciones para mejorar este documento.

Si desea ayudar con este esfuerzo, comuníquese con Juan Guillermo Jaramillo al +57 310 830 6732 (teléfono celular colombiano), o envíe un correo electrónico a [arcas1956@gmail.com](mailto:arcas1956@gmail.com) ; alternatively, póngase en contacto con Kim Garwood en [kimgrwd@sbcglobal.net](mailto:kimgrwd@sbcglobal.net) o visite [www.neotropicalbutterflies.com](http://www.neotropicalbutterflies.com) .

Todos los errores son responsabilidad de Juan Guillermo Jaramillo V. y Kim Garwood.

**En este documento los capítulos 4 Pyrginae y 6 Hesperinae aún están incompletos y no están revisados en su totalidad.**

## Important note

---

This paper is the first installment of six in the Neotropical Butterfly Family Guides PDF series. It may contain errors in a variety of details and identifications, but because it is only produced in an electronic version, it is easy to correct all errors. We appreciate all the criticism, suggestions and corrections to improve this document.

If you would like to help with this effort, please contact Juan Guillermo Jaramillo on +57 310 830 6732 (Colombian cell phone), or email [arcas1956@gmail.com](mailto:arcas1956@gmail.com); alternatively contact Kim Garwood at [kimgrwd@sbcglobal.net](mailto:kimgrwd@sbcglobal.net) or visit [www.neotropicalbutterflies.com](http://www.neotropicalbutterflies.com).

All errors are the responsibility of Juan Guillermo Jaramillo and Kim Garwood.

**In this document, Chapters 4 Pyrginae and 6 Hesperinae are still incomplete and not fully revised.**

## Agradecimientos

---

Este catálogo es el resultado del esfuerzo acumulativo de un gran número de colaboradores y fotógrafos a quienes damos las gracias.

En esta familia Hesperidae agradecemos especialmente a **Bernard Hermier** por las innumerables horas y páginas de explicaciones y correcciones sin las cuales habría sido imposible hacer este volumen.

A Andrés Arenas por sus consejos y ayuda en la elaboración de la base de datos. También a Andrew Neild, Julián Salazar y Cristóbal Ríos-Málaver por sus consejos y recomendaciones.

Todos los errores en identificación son responsabilidad de Kim Garwood o Juan Guillermo Jaramillo V.

## Acknowledgments

---

This catalog is the result of the cumulative effort of many collaborators and photographers to whom we are most grateful.

In this Hesperidae family we especially thank **Bernard Hermier** for the countless hours and pages of explanations and corrections without which this volume would have been impossible.

To Andrés Arenas for his advice and help in preparing the database. Also to Andrew Neild, Julián Salazar and Cristóbal Ríos-Málaver for their advice and recommendations.

All errors in identifications are the responsibility of Kim Garwood and Juan Guillermo Jaramillo V.

# BUTTERFLY CATALOGS

---

Foto: Kim Garwood

Este catálogo fotográfico es un legado porque varios de los sitios donde fueron tomadas las fotos ya fueron destruidos y por lo tanto las especies registradas ya no existen en esa localidad específica. El catálogo ilustra la asombrosa diversidad de mariposas en esta familia para motivar su conocimiento y conservación.

**“Solo podemos conservar y proteger lo que conocemos”** JGJ

This photographic catalog is a legacy because several sites where photos were taken have already been destroyed and therefore the recorded species no longer exist in that specific location. The catalog illustrates the amazing diversity of butterflies in this family to motivate their knowledge and conservation.

**“We can only conserve and protect what we know”** JGJ

# *Neotropic Skippers*

**Hesperiidae  
del Neotropico**
