Esta guía está dedicada a todas las personas que nos han ayudado a construirla y a todos aquellos que están trabajando por el conocimiento y la conservación de la naturaleza

This guide is dedicated to all the people who have helped us to build it and to all those who are working for the knowledge and conservation of nature

Introducción

Con el propósito fundamental de hacer educación y crear conciencia sobre la importancia de las mariposas en el ecosistema y su necesidad de conservarlas hemos recopilado información en la base de datos BioButterfly.

Con esta base de datos elaboramos catálogos y guías de mariposas, tanto para todo el Neotrópico como para países y localidades desde México hasta Argentina.

Las guías contienen fotografías que han recopilado y tomado los autores y otros 362 fotógrafos quienes desinteresadamente nos las han cedido para nuestro trabajo. Por ello al final de este documento tenemos un listado completo de todos aquellos que han contribuido con sus fotos. Estas fotografías representan miles de horas de trabajo de campo que de otra manera hubiera sido casi imposible de recopilar.

Esta información está en constante evolución y cambio por eso creemos que las versiones electrónicas son la mejor opción, pues al poder generar listados y guías sin costo de impresión cada que se quiera puede ser el mecanismo más práctico para recopilar y compartir la información sobre las mariposas neotropicales.

Para la presentación y diagramación del documento escogimos un formato entre científico y didáctico pues, aunque la información es muy científica, el uso de fotos ayuda a atraer público general y este es parte del objetivo: comunicar para educar y conservar.

Esperamos que esta información sea de utilidad al aumentar el conocimiento sobre las mariposas y que ayude a fomentar la observación, estudio, fotografía y disfrute de estas y que la información pueda ser utilizada por gobiernos, instituciones o personas para tomar decisiones y crear conciencia sobre la necesidad de su estudio y conservación

Introduction

With the fundamental purpose of educating and raising awareness about the importance of butterflies in the ecosystem and the need to conserve them, we have compiled information in the BioButterfly database.

With this database we create butterfly catalogs and guides, both for the entire Neotropics and for countries and localities from Mexico to Argentina.

The guides contain photographs that have been compiled and taken by the authors and 362 other photographers who selflessly have given them up for our work. That is why at the end of this document we have a complete list of all those who have contributed their photos. These photographs represent thousands of hours of fieldwork that would otherwise have been nearly impossible to collect.

This information is constantly evolving and changing, which is why we believe that the electronic versions are the best option, because by being able to generate lists and guides without printing costs whenever you want, it can be the most practical mechanism for collecting and sharing information about neotropical butterflies.

For the presentation and layout of the document we chose a format between scientific and didactic because, although the information is very scientific, the use of photos helps to attract the general public and this is part of the objective: to communicate to educate and conserve.

We hope that this information will be useful in increasing knowledge about butterflies and that it will help promote the observation, study, photography and enjoyment of these, and that the information can be used by governments, institutions or individuals to make decisions and raise awareness about the need for its study and conservation

Nota importante

Estas guías y listados de chequeo son el resultado de más de veinte años de trabajo de los autores. Para llegar al resultado que usted tiene en sus manos hemos contado con la generosa ayuda de muchos científicos expertos y de un gran número de fotógrafos.

Estas publicaciones son producto de la recopilación de bibliografía y registros fotográficos de muchas localidades en países del Neotrópico. El usuario debe saber que identificar algunas especies a partir solamente de fotografías tiene implícito un margen de error, por lo que es posible que las guías tengan algunas identificaciones incorrectas, o carentes de la precisión que desearíamos para todas, a pesar de nuestro esfuerzo y del conocimiento que los expertos consultados tienen.

Para elaborar las guías usamos fotos de mariposas tomadas en diferentes países y de estas seleccionamos la foto o fotos que mejor representen a la especie, por lo tanto, esa foto o fotos las usamos para todas las guías de familia o para los diferentes países. Es por esta razón que es posible, por ejemplo, encontrar en una guía del Ecuador una mariposa fotografiada en el Perú. Nosotros tenemos la certeza de que dicha mariposa ha sido registrada en Ecuador, pero usamos la foto que mejor represente la especie, así haya sido tomada en otro país, porque la idea es que el usuario tenga la mejor idea posible de cómo luce la mariposa.

La publicación, al ser generada electrónicamente, es fácil de corregir, no implica desperdicio de papel y se puede actualizar permanentemente. Si encuentra algún error o inconsistencia, tenemos una metodología para corregirla: por favor llame a Juan Guillermo Jaramillo V. al celular +57-310 830 6732 o escriba al correo arcas1956@gmail.com o a Kim Garwood kimgrwd@sbcglobal.net.

Note

These guides and checklists are the result of more than twenty years of work by the authors. To reach the result you have in your hands, we have had the generous help of many expert scientists and a large number of photographers.

These publications are the product of the compilation of bibliography and photographic records from many locations in Neotropical countries. The user must know that identifying some species from only photographs has an implicit margin of error, so it is possible that the guides have some incorrect identifications or lack the precision that we would like for all of them, despite our efforts and the knowledge that the consulted experts have.

To prepare the guides we use photos of butterflies taken in different countries and from these we select the photo or photos that best represent the species, therefore, we use that photo or photos for all the family guides or for the different countries. It is for this reason that it is possible, for example, to find a butterfly photographed in Peru in a guide to Ecuador. We are certain that this butterfly has been registered in Ecuador, but we use the photo that best represents the species, even if it was taken in another country, because the idea is that the user has the best possible idea of what the butterfly looks like.

The publication, being generated electronically, is easy to correct, does not imply waste of paper and can be permanently updated. If you find any error or inconsistency, we have a methodology to correct it: please call Juan Guillermo Jaramillo V. at +57-310 830 6732 or write to arcas1956@gmail.com or Kim Garwood kimgrwd@sbcglobal.net.

Convenciones

Para cada foto de una especie se trata de dar la mayor cantidad de información posible en el menor espacio, los números en azul significan:

Keys

For each photo of a species, it is about giving as much information as possible in the smallest space, the numbers in blue mean:

1 *Hyphilaria thasus*
 2 *Cremna*
 5 CO- SHo 780m Oct16

♂ 3
 JGJ4
 MX-PE, BR, PY 6

1- Nombre científico	1- Scientific name
2- Nombre anterior	2- Previous name
3- Sexo	3- Sex
4- Fotografía	4- Photographer
5- Información de la foto	5- Photo information
6- Rango geográfico	6- Geographic range
7- Secuencia de la foto	7- Photo sequence

1 Nombre científico

El nombre científico con género, especie y subespecie cuando sea posible.

Los nombres científicos con el género y **sp** corresponden a especies que tienen una identificación desconocida o dudosa, ya que puede haber varias especies con dudas será **sp1**, **sp2**, etc., una vez que se identifique positivamente, la **sp** se cambiará al nombre correcto de la especie.

En el caso de especies no descritas para la ciencia, que todavía no tienen nombre, colocamos **sp nov**. Por favor, si puede ayudarnos a completar o corregir, escríbanos a los contactos.

En muchos lugares hay especies sin identificación positiva, preferimos colocar fotos de estas especies para que se sepa que esta especie está en ese lugar y para que en el futuro alguien pueda describirla. En caso de que tengamos dudas incluso con el género, ponemos el género que consideramos más cercano y dos signos de interrogación como este: ??.

En algunos casos de especies que se encuentran en estudios taxonómicos colocamos mientras se definen los nombres así: **sp [grupo]**

La taxonomía y la secuencia de este catálogo sigue los autores que están especificados en nuestra publicación: lista Mariposas del Neotrópico Lista de Chequeo Suramérica.

2 Nombre anterior

Con la taxonomía revisada recientemente con el ADN, varias especies cambiaron el género o el nombre, en esos casos colocaremos el antiguo género o nombre con el texto en rojo.

3 Sexo

Cuando sea posible, ponemos el sexo del espécimen de la foto, ya sea porque tienen

1 Scientific name

The scientific name with genus, species and subspecies when possible.

The scientific names with the genus and sp correspond to species that have an unknown or doubtful identification, since there may be several species with doubts, it will be **sp1**, **sp2**, etc., once it is positively identified, the **sp** will be changed to the correct name of the species.

In the case of species not described to science, which do not yet have a name, we put **sp nov**. Please, if you can help us to complete or correct, write to the contacts.

In many places there are species without positive identification, we prefer to post photos of these species so that it is known that this species is in that place and so that in the future someone can describe it. In case we have doubts even with the gender, we put the gender that we consider closest and two question marks like this: ??.

In some cases of species found in taxonomic studies, we place the names as follows: **sp [group]**

The taxonomy and sequence of this catalog follows the authors that are specified in our publication: Neotropical Butterflies Checklist South America.

2 Former name

With the taxonomy recently revised with DNA, several species changed the genus or name, in those cases we will put the old genus or name with the red text.

3 Sex

Whenever possible, we put the sex of the specimen in the photo, either because they have sexual dimorphism or because in some cases, we observed the female laying eggs.

dimorfismo sexual o porque en algunos casos observamos a la hembra poniendo huevos.

4 Fotógrafo

La abreviación del nombre del fotógrafo que tomó la foto reconoce su colaboración, por favor nos informan de cualquier error para su corrección.

5 Información de la foto

Cuando sea posible, la información de la foto tendrá la abreviación del país, la localidad, la altitud y el mes/día en que se tomó la foto.

La mayoría de las fotos fueron tomadas de mariposas vivas en su entorno natural. El país donde fue tomado se indica con una abreviatura de dos letras. Esta abreviatura corresponde al código internacional utilizado como la terminación de Internet del código de cada país, por ejemplo. Brasil **BR**, Ecuador **EC**, Perú **PE** etc.

Después del código del país, ponemos una abreviatura de la localidad (consulte la tabla de códigos equivalentes para las localidades), luego la altitud donde se tomó la foto en metros sobre el nivel del mar y el mes y día, para dar una idea de la fecha que estuvo volando en este lugar.

De cada especie o subespecie escogemos las mejores fotos que la representen tanto ventral-dorsal como macho-hembra y estas fotos se usan en las guías para todos los países. Hay muchas especies que son comunes a casi todos los países y que no difieren significativamente en su forma o color entre los países, porque tratar de que la guía de un país o localidad solo tenga fotos tomadas en ese país o localidad se convierte en un proyecto titánico, sabiendo que tenemos más de 14.000 taxones para el Neotrópico.

6 Rango

El rango de distribución de las especies con una abreviatura del nombre de los países de norte a sur, en algunos casos con especies que habitan en los Estados Unidos y México, utilizamos el

4 Photographer

The abbreviation of the name of the photographer who took the photo acknowledges their collaboration, please inform us of any errors for correction.

5 Photo information

Whenever possible, the photo information will contain the abbreviation of the country, the locality, the altitude, and the month/day the photo was taken.

Most of the photos were taken of live butterflies in their natural environment. The country where it was taken is indicated by a two-letter abbreviation. This abbreviation corresponds to the international code used as the Internet termination of the code of each country, for example. Brazil **BR**, Ecuador **EC**, Peru **PE** etc.

After the country code, we put an abbreviation of the locality (see the table of equivalent codes for localities), then the altitude where the photo was taken in meters above sea level and the month and day, to give an idea of the date they were flying at this location.

From each species or subspecies, we choose the best photos that represent it both ventral-dorsal and male-female and these photos are used in the guides for all countries. There are many species that are common to almost all countries and that do not differ significantly in their shape or color between countries, because trying to make the guide of a country or locality using only photos taken in that country or locality becomes a titanic project knowing that when we have more than 14,000 taxa for the Neotropics.

6 Range

The distribution range of the species with an abbreviation of the name of the countries from north to south, in some cases with species that inhabit the United States and Mexico, we use the code of the southernmost states where the species are **Tx** Texas, **Chi** Chiapas. In big

código de los estados más australes donde están las especies **Tx** Texas, **Chi** Chiapas. En países grandes como Brasil, la parte superior del Amazonas, la parte inferior, etc. Colombia y otros países pueden tener una posición relativa a la cordillera de los Andes y esta información se coloca entre paréntesis después de la abreviación del país.

7 Secuencia de la foto

En la esquina superior derecha, hay un número consecutivo que ayuda a localizar o hacer referencia rápidamente a la posición de una especie en la guía.

Las fotos de especímenes se usan para mostrar algunas características que no son posibles de fotografiar en la naturaleza o para mostrar especies de las cuales aún no tenemos especímenes vivos. Además, en algunos casos se toman fotos dorsales de especies capturadas para identificarlas mejor, estas mariposas se liberan inmediatamente después de la foto. Las fotos de especímenes o fotos de baja calidad serán reemplazadas una vez que se tomen mejores fotos de estas especies, cualquier colaboración que permita completar la guía será bienvenida y el fotógrafo tendrá los créditos.

countries like Brazil, the upper part of the Amazon, the lower part, etc. Colombia and other countries may have a position relative to the Andes Mountain range and this information is placed in parentheses after the country abbreviation.

7 Photo Sequence

In the upper right corner, there is a consecutive number that helps to quickly locate or refer to the position of a species in the guide.

Specimen photos are used to show some features that are not possible to photograph in the wild or to show species for which we do not yet have live specimens. In addition, in some cases dorsal photos of captured species are taken to better identify them, these butterflies are released immediately after the photo. Photos of specimens or photos of low quality will be replaced once better photos of these species are taken, any collaboration that allows to complete the guide will be welcome and the photographer will have the credits.

Familia Riodinidae

En este listado colocamos todos los géneros en el Neotrópico de la familia agrupados por subfamilia, de tal manera que se pueda saber la ubicación de un género. Todos los generos no necesariamente estan en un país o localidad.

We have listed below all the Neotropic genera in the family within each subfamily, to help with locating a particular genus. All genera are not necessarily in one country or locality.

Bibliografía

Bibliography

El Neotrópico por su diversidad de mariposas tiene mucha información publicada en libros y revistas especializadas, esta información nos ha ayudado a construir el catálogo de BioButterfly Database y a identificar muchas de nuestras fotos.

Inicialmente estábamos colocando la bibliografía en cada PDF tratando de asociar los artículos relevantes a cada PDF específico, básicamente si se relaciona con una familia, un país o una localidad. Decidimos hacer una bibliografía general combinada en formato PDF independiente con citas para todas las publicaciones que hemos estado usando de tal manera que sea útil para todos nuestros PDF y al mismo tiempo libere espacio en todos los PDF.

Con el siguiente vínculo acceda al PDF con la bibliografía.:

<https://www.butterflycatalogs.com/neotropical-bibliography.html>

Si se quiere profundizar en la bibliografía del Neotrópico, con artículos de mariposas desde México hasta Argentina, recomendamos un excelente documento recopilado por el Dr. Gerardo Lamas 2022 que se encuentra en la página de Butterflies of America BOA llamado: **An Annotated Bibliography of the Neotropical Butterflies and Skippers (Lepidoptera: Papilionoidea and Hesperioidea) Revised Electronic Edition** que se puede consultar en el siguiente vínculo:

<http://www.butterfliesofamerica.com/L/Biblio.htm>

Permanentemente estamos buscando información que nos ayude a completar la base de datos, especialmente cambios en la taxonomía de las

The Neotropics, due to its diversity of butterflies, have a lot of information published in books and specialized magazines. This information has helped us to build the BioButterfly Database catalog and to identify many of our photos.

Initially we were placing the bibliography in each PDF trying to associate the relevant articles to each specific PDF, basically if it related to a family, a country or a locality. We decided to make a general combined bibliography as a separate PDF with citations for all the publications we have been using in such a way that it is useful for all our PDFs and at the same time it frees up space in all the PDFs.

With this link access the PDF with the bibliography:

<https://www.butterflycatalogs.com/neotropical-bibliography.html>

If you want to delve into the Neotropical bibliography, with articles on butterflies from Mexico to Argentina, we recommend an excellent document compiled by Dr. Gerardo Lamas 2022 found on the Butterflies of America BOA page called: **An Annotated Bibliography of the Neotropical Butterflies and Skippers (Lepidoptera: Papilionoidea and Hesperioidea) Revised Electronic Edition** which can be consulted at the following link:

<http://www.butterfliesofamerica.com/L/Biblio.htm>

We are constantly looking for information to help us complete the database, especially changes in the taxonomy of species, new species and species by country or region. We appreciate all the references that you can send us.

especies, nuevas especies y especies por país o regiones. Agradecemos todas las referencias que nos puedan enviar.

Páginas web recomendadas

Recommended web pages

Existen muchísimas fuentes de información sobre mariposas en Internet, sin embargo, presentamos acá una selección de aquellas recomendadas que puedan dar información complementaria a la bibliografía, las listas de chequeo o las guías, o pueden tener información útil para la identificación o el conocimiento de las mariposas.

There are many sources of information about butterflies on the internet, however, we present here a selection of those recommended that can provide complementary information to the bibliography, the checklists, or the guides, or may have useful information for the identification or knowledge of butterflies.

Agradecimiento a Fotógrafos

Acknowledgement to Photographers

Gran parte de este trabajo se sustenta en la base de datos de fotografías de mariposas, y esto no sería posible sin la colaboración desinteresada de los fotógrafos y las instituciones que nos han ayudado. Por lo tanto, queremos expresar nuestro más sincero agradecimiento por su valiosa colaboración y hacerles saber que sus fotografías son hoy un importante aporte para la ciencia y la conservación.

Las fotos obtenidas de plataformas como iNaturalist han sido de gran utilidad para mejorar nuestras guías y listados. En algunos casos, no se especifica correctamente el nombre del fotógrafo, por lo que hemos utilizado el nombre proporcionado en la aplicación.

Agradecemos nuevamente a todos los fotógrafos que han contribuido con sus imágenes, ya que su generosidad y dedicación han enriquecido significativamente nuestro trabajo en el campo de las mariposas del neotrópico.

A significant part of this work relies on the butterfly photograph database, which would not be possible without the selfless collaboration of these individuals and institutions that have assisted us. Therefore, we would like to express our heartfelt gratitude for their collaboration and show them that their photos are now an important contribution to science and conservation.

Photos taken from platforms like iNaturalist have helped us continue improving our guides and listings. In some cases, the photographer's name is not accurately specified, so we have used the name provided in the application.

We once again thank all the photographers who have contributed their images, as their generosity and dedication have significantly enriched our work in the field of Neotropical butterflies.

Agradecimientos

Acknowledgments

Queremos dar las gracias a todos los colaboradores, científicos, aficionados y fotógrafos que han contribuido en la realización de estas guías y listados de mariposas del neotrópico. Sin ellos, no habrían sido posibles completar estas publicaciones.

Agradecemos especialmente a los Doctores Gerardo Lamas y Olaf Mielke, quienes han dedicado su vida a la investigación y educación sobre las mariposas del neotrópico. En la familia HesperIIDae agradecemos al experto Bernard Hermier por sus innumerables horas y páginas de explicaciones y correcciones.

Al Dr. Keith Willmott por sus consejos en la elaboración de estos trabajos e identificación de fotos. A Jean-Claude Petit por las múltiples adiciones de especies y correcciones para Ecuador. Al Dr Gerardo Lamas y Mike McInnis por la información sobre el parque nacional del Manu.

Agradecemos a los siguientes expertos que generosamente han ayudado con información y en la identificación de fotos que han servido de soporte al listado (en orden alfabético): Stéphane Attal, Dr. Andrew Brower, Prof. James Mallet, Andrew Neild, Gregory Nielsen, Dr. Tomasz Pyrcz, Dr. Robert Robbins, Julián Salazar y Aaron Soh.

A Andrés Arenas por sus consejos y ayuda en la elaboración de la base de datos. A Andrew Neild por sus fotos, recomendaciones y sugerencias. A David Geale por sus innumerables aportes fotográficos. A Juan Esteban Berrio por su ayuda en el procesamiento de fotos.

We would like to thank all collaborators, scientists, enthusiasts and photographers who have contributed to the creation of these guides and checklist of Neotropical butterflies. Without them, these publications would not have been possible to complete.

We especially thank Doctors Gerardo Lamas and Olaf Mielke, who have dedicated their lives to research and education on Neotropical butterflies. In the family HesperIIDae, we thank expert Bernard Hermier for his countless hours and pages of explanations and corrections.

We also thank Dr. Keith Willmott for his advice in the creation of these works and identification of photos, Jean-Claude Petit for his multiple additions of species and corrections for Ecuador, Dr Gerardo Lamas and Mike McInnis for their information on the Manu National Park.

We thank the following experts who generously helped with information and identification of photos that supported the checklist (in alphabetical order): Stéphane Attal, Dr. Andrew Brower, Prof. James Mallet, Andrew Neild, Gregory Nielsen, Dr. Tomasz Pyrcz, Dr. Robert Robbins, Julian Salazar, and Aaron Soh.

We thank Andrés Arenas for his advice and help in creating the database, Andrew Neild for his photos, recommendations, and suggestions, David Geale for his countless photographic contributions, Juan Esteban Berrio for his help in photo processing.

We thank Blanca Huertas and Cristóbal Ríos-Málaver, colleagues in the Colombia checklist that was the foundation for this work, Gabriel Rodríguez for his recommendations and

A Blanca Huertas y Cristóbal Ríos-Málaver compañeros en el listado de Colombia que fue la primera piedra para este trabajo. A Gabriel Rodríguez por sus recomendaciones y por los múltiples datos geográficos de su colección de mariposas. Al Dr. Juan José Arango por su motivación y sus recomendaciones técnicas y editoriales, a Rodrigo Bernal y Daniel Jaramillo F. por sus consejos y colaboración. A Maristela Zamoner por sus traducciones al portugués y ayuda con la información de Brasil. A Michael Campos por su apoyo y su colaboración.

Al Museo de Historia Natural de Londres (Natural History Museum) y al McGuire Center de la Universidad de la Florida por permitirnos el acceso a sus colecciones, ejemplares y datos. A Blanca Huertas por todos sus consejos y recomendaciones.

A los creadores de las aplicaciones gratis Gimp, PDF24 Tools, ChatGPT de OpenAI, con las que ha sido posible ensamblar y corregir estos documentos.

A la aplicación iNaturalist proyecto de ciencia ciudadana y red social en línea de naturalistas, científicos ciudadanos, y biólogos basada en el concepto de mapeo e intercambio de observaciones de biodiversidad, algunos registros en iNat han permitido ingresar a BioButterfly Database nuevas especies para Colombia y otros países.

Especial agradecimiento a las familias de los autores (Adriana, Sarita, Jerónimo y Alejandro), por su apoyo durante la realización de este proyecto.

geographical data from his butterfly collection, Dr. Juan José Arango for his motivation and technical and editorial recommendations, Rodrigo Bernal and Daniel Jaramillo F. for their advice and collaboration, Maristela Zamoner for her translations to Portuguese and help with information from Brazil, Michael Campos for his support and collaboration.

We thank the Natural History Museum of London and the McGuire Center at the University of Florida for allowing us access to their collections, specimens, and data. We thank Blanca Huertas for all her advice and recommendations.

We thank the creators of the free applications Gimp, PDF24 Tools, ChatGPT from OpenAI, with which it was possible to assemble and correct these documents.

We thank the iNaturalist application, a citizen science and online social network of naturalists, citizen scientists, and biologists based on the concept of mapping and sharing observations of biodiversity, some records in iNat have allowed new species to be entered into the BioButterfly Database for Colombia and other countries.

A special thank you to the families of the authors (Adriana, Sarita, Jerónimo and Alejandro), for their support during the creation of this project.

Guías y listados de chequeo

Guides & Checklists

En <https://www.butterflycatalogs.com/> se pueden descargar gratis los listados o guías de mariposas del Neotrópico, Brasil, Colombia, Ecuador, Perú y Bolivia. O solicitar a los autores un listado o guía específico para países desde México hasta Argentina.

At <https://www.butterflycatalogs.com/> you can download free butterfly checklists or guides for the Neotropics, Brazil, Colombia, Ecuador, Peru and Bolivia. Or ask the authors for a specific list or guide for countries from Mexico to Argentina.

Listas de chequeo

Checklists

Estos listados se elaboran como un documento independiente de las guías fotográficas para un país o una región con muchas especies de mariposas.

These checklists are produced as a separate document from the photographic guides for a country or region with many species of butterflies.

Guías de familias

Family guides

Las guías fotográficas para familias se han elaborado para una familia de todo el neotrópico y posteriormente se generan para un país específico.

The photographic guides for families have been elaborated for a family from all over the neotropics and later they are generated for a specific country.

Guías de localidades

Locality guides

Estas contienen la guía fotográfica de las especies y subespecies de una localidad específica, se acompaña del listado respectivo.

These contain the photographic guide of the species and subspecies of a specific locality, accompanied by the respective list.

Listas & guías del Neotropico

Neotropic checklist & guides

En la base de datos estamos recopilando todas las especies y subespecies del neotrópico, de allí se van seleccionando las especies presentes en cada país y con estas se generan los listados de un país o las guías de una familia del neotrópico o de un país.

In the database we are compiling all the species and subspecies of the neotropics, from there the species present in each country are selected and with these the lists of a country or the guides of a family of the neotropics or of a country are generated.

Guías por demanda

Guides on demand

Con estas guías se acompañan los esfuerzos personales o de entidades para ayudar generar una guía fotográfica específica de una localidad o región.

También se pueden solicitar guías específicas de un género, subtribu, tribu, subfamilia, etc.

With these guides, personal or entity efforts are accompanied to help generate a specific photographic guide of a locality or region.

You can also request guides specific to a genus, subtribe, tribe, subfamily, etc.

El Colapso de los Insectos

Estos pequeños seres desempeñan funciones importantes en los ecosistemas del mundo, como la polinización de las plantas y la eliminación de residuos orgánicos, además de ser el alimento para muchas especies animales. Sin embargo, la población de insectos está disminuyendo a un ritmo alarmante, lo que representa una amenaza para la estabilidad de la vida en el planeta y la seguridad alimentaria de la humanidad.

Los factores que contribuyen a la disminución de la población de insectos son variados, incluyendo el uso intensivo de la tierra para la agricultura y la ganadería, la urbanización y el cambio climático. Además, el aumento en el uso de agroquímicos es una causa importante, lo que ha llevado en algunos lugares a una disminución en la abundancia de especies de más del 60% y una disminución del 27% en el número de especies. En Europa, los insectos voladores han disminuido en un 80%, lo que afecta directamente la población de aves. Se estima que la tasa de extinción de los insectos es 8 veces superior a la de mamíferos, reptiles y aves.

Los insectos son imprescindibles para el buen funcionamiento de los ecosistemas, polinizan plantas, controlan las plagas, reciclan materia orgánica, ayudan en la formación del suelo. Sin ellos, la cadena alimentaria y el equilibrio ecológico pueden verse seriamente comprometidos.

La pérdida de insectos como las mariposas, polillas y abejas podría afectar la salud humana y la seguridad alimentaria, ya que el 75% de los cultivos alimentarios dependen de los insectos polinizadores. No se conoce el punto de no retorno en que las poblaciones puedan colapsar sin posibilidades de retorno, por lo que es necesario tomar medidas inmediatas para proteger a estos importantes seres vivos.

Es importante que cada persona haga su parte para proteger a los insectos, incluyendo las mariposas. Podemos comenzar plantando especies nativas, dejando y creando rastrojo, disminuyendo la frecuencia en que se corta el césped y reduciendo o eliminando el uso de pesticidas en los jardines. También es necesario crear jardines funcionales en las áreas urbanas y no consumir alimentos que provengan o estimulen la deforestación.

Además, es importante que la población y los gobiernos de todo el mundo tomen medidas para proteger a los insectos. La educación y la concientización sobre la importancia de los insectos en los ecosistemas locales son fundamentales para garantizar su supervivencia. Los gobiernos también deben tomar medidas para limitar el uso de agroquímicos y fomentar la protección de las áreas naturales.

Esta guía de mariposas es un legado valioso porque varios de los sitios donde fueron registradas y fotografiadas las especies **ya están destruidos** y por lo tanto estas especies ya no existen en esa localidad específica. La guía ilustra la asombrosa diversidad de mariposas del Neotrópico para motivar su conocimiento y conservación, pero especialmente para que evitemos su desaparición para las generaciones futuras

Recomendamos ver el artículo de Reuters donde se amplía la información resumida en este capítulo:

Fotos de insectos Juan Guillermo Jaramillo

The Collapse of the Insects

These small creatures play important roles in the world's ecosystems, such as pollinating plants and eliminating organic waste, as well as being food for many animal species. However, the insect population is decreasing at an alarming rate, posing a threat to the stability of life on the planet and to humanity's food security.

Factors contributing to the decline in the insect population are varied, including intensive land use for agriculture and livestock, urbanization, and climate change. Additionally, the increased use of agrochemicals is a major cause, leading to a decline in species abundance of over 60% in some areas and a decrease of 27% in the number of species. In Europe, flying insects have decreased by 80%, directly affecting the bird population. The extinction rate for insects is estimated to be 8 times higher than that for mammals, reptiles, and birds.

Insects are essential for the proper functioning of ecosystems, pollinating plants, controlling pests, recycling organic matter, and helping in soil formation. Without them, the food chain and ecological balance can be seriously compromised.

The loss of insects such as butterflies, moths, and bees could affect human health and food security since 75% of food crops depend on pollinating insects. The point of no return at which populations may collapse beyond recovery is unknown, making immediate action necessary to protect these important living beings.

It is important for each person to do their part to protect insects, including butterflies. We can start by planting native species, leaving, and creating weedy patches, reducing the frequency of lawn mowing, and reducing or eliminating pesticide use in gardens. It is also necessary to create functional gardens in urban areas and avoid consuming foods that come from or encourage deforestation.

Furthermore, it is important for populations and governments around the world to take action to protect insects. Education and awareness about the importance of insects in local ecosystems are crucial to ensure their survival. Governments must also take measures to limit the use of agrochemicals and promote the protection of natural areas.

This butterfly guide is a valuable legacy because several of the sites where the species were recorded and photographed **have already been destroyed**, and therefore these species no longer exist in that specific location. The guide illustrates the astonishing diversity of neotropical butterflies to promote their knowledge and conservation, but especially to prevent their disappearance for future generations.

We recommend seeing the Reuters article where the information summarized in this chapter is expanded:

<https://www.reuters.com/graphics/GLOBAL-ENVIRONMENT/INSECT-APOCALYPSE/egpbykdxjq/>

Insect photos by Juan Guillermo Jaramillo
